

Project Design Phase-I

Problem – Solution Fit Template

Date	15 Feb 2026
Team ID	LTVIP2026TMIDS73343
Project Name	Heart Disease Analysis
Maximum Marks	5 Marks

Problem – Solution Fit:

Problem-Solution fit canvas 2.0		Purpose / Vision	
Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. working parents of 0-5 y.o. kids Healthcare providers, cardiac researchers, heart-health conscious patients.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Limited time for manual data entry and a lack of data science expertise.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking Static medical reports and manual Excel filtering with no visual correlation.
	Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different sides. Analyzing patient lifestyle data to identify clinical heart disease risks quickly.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Heart health data is too complex to interpret without interactive visualization.
Identify strong TR & EM		3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Seeing confusing raw medical spreadsheets without a way to visualize trends.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. An interactive Tableau and Flask dashboard for real-time risk assessment.
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: Overwhelmed by complex data; worried about missing a risk factor. After: Confident and empowered with clear, interactive visual insights.	8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Hosting the app on a local server (127.0.0.1:5000) and retrieving data from the local MySQL database	Extract online & offline CH of BE
